SUMARY OF SKILLS

Languages :	▪ Java, C, C#, Rust, JavaScript, TypeScript, Python, SQL, JSON, XML, YAML
Frontend:	▪ HTML, PHP, Thymeleaf, CSS, React, Tailwind CSS, React Native, Angular, .NET MAUI
Backend & Full-Stack:	▪ .NET, Spring Boot, Express.js, WCF, Tauri
Databases:	▪ mySQL, Oracle, MongoDB, ADO.NET, Entity Framework, Prisma
Cloud & DevOps:	▪ AWS, Linux/UNIX Admin
Tools & Workflow:	▪ Figma, Git, GitHub, Jira, Eclipse, Vs Code, Visual Studio, Postman
Software & Methodologies	▪ OOP, OOD, Agile, Scrum

WORK EXPERIENCE

Code Ninjas, Code Sensei, *Mar 2022-Present*

- Taught Scratch, MakeCode Arcade, JavaScript, and Unity.
- Managed class sizes of up to 20 students.
- Assisted students with understanding course material, debugging, and enriching their overall learning experience.

EDUCATION

Sheridan College, *Aug 2025*
Diploma, Computer Programming

PROJECTS

Time Tracker | Tauri, Rust, React, TypeScript, Tailwind CSS, SQLite, GitHub, Figma

- Developed a cross-platform desktop time tracking app using Tauri 2 with Rust backend and React frontend.
- Implemented automatic foreground window monitoring across Windows, macOS, and Linux using native platform APIs.
- Built responsive UI with Tailwind CSS for system tray integration and regex-based app categorization.
- Designed local-first architecture with SQLite for offline storage; zero cloud, zero telemetry, 100% private.
- Utilized TypeScript, Vite, and Rust async patterns (Tokio, sqlx) for efficient cross-platform performance.

TikTok Archiver | Rust, yt-dlp, Headless Chrome, YAML

- Built a minimal TikTok account watcher and downloader in Rust that monitors configured accounts and keeps a JSON state of seen videos.
- Integrated headless Chrome for TikTok login and cookie capture, and used yt-dlp via a configurable Python path for video downloads.
- Designed a local-first workflow with YAML config (accounts, download directory) and JSON state files for seen videos, account metadata, and activity logs.
- Implemented polling and discovery of new videos with per-account state and download status tracking.

Product CRUD Web & API App | Java, Spring Boot, Thymeleaf, Eclipse, Postman

- Developed a full-stack Spring Boot app with user registration via a web interface and product CRUD via both web and REST API.
- Integrated role-based access control: only web-registered users can delete with ADMIN role.
- Leveraged Spring Security, Thymeleaf, and H2 for secure, responsive functionality.

TriviaGame | C#, .NET Framework, WPF, Entity Framework, Visual Studio, GitHub

- Built a desktop trivia game with user sign-up/login, score tracking, and dynamic question fetching from Open Trivia DB API.
- Implemented session management and real-time question logic using WPF and DB-first Entity Framework.
- Utilized a local SQL Server instance for persistent user data including scores and answer stats.
